

Tyler Dove

303-912-7536 | tyler@leadnovel.com

Skills

- **CAD Design** – AutoCAD, Civil 3D, SolidWorks, Fusion 360, SketchUp
- **Bluebeam** – prior experience and overall familiarization with the software
- **Material Testing** – mortar analysis, brick capping, compression and tensile testing
- **3D Manufacturing** – Resin, powder, and filament-based 3D printing
- **Microsoft and Google Suites** – experience and familiarity with Google and Microsoft office products

Education

Vanderbilt Bachelor of Science in Civil Engineering, Minor in Digital Fabrication – Spring 2028

- **GPA – 3.9**
- Traveling member of the men's club soccer team
- Active member of the American Society of Civil Engineers

Boulder High School – Graduated 2024

- Honor Society
- AP Scholar with Distinction Award
- Two-year captain of men's soccer team

Experience

***Impressio Technology Engineering Internship* – 2026**

- Supported product development through the full lifecycle, including design, prototyping, testing, and manufacturing.
- Collaborated with clients, including the Denver Police Department and the United States Department of Defense, to develop and refine technical solutions.
- Created engineering documentation and supported production workflows to improve manufacturing efficiency.
- Operated and maintained advanced prototyping and testing equipment, including SLS and SLA 3D printers, tensile testing systems, and compression testing machinery.
- Assisted with design validation, product testing, and quality assurance activities to evaluate performance and manufacturability.

Accessible Playground Structure Design – 2025

- Applied a client-focused, iterative design process to develop an accessible playground structure that addressed user needs and project requirements.
- Led team ideation efforts and guided the design development process from concept generation through final design selection.
- Managed the development of the final design model and comprehensive material takeoff for project implementation.
- Designed within defined physical, budgetary, and accessibility constraints, balancing functionality, safety, and constructability.

Sustainable Solutions Competition – 2025

- Led the design and modeling of a proposed data center site for the American Society of Civil Engineers Sustainable Solutions Competition.
- Directed site planning efforts and developed innovative strategies to meet renewable energy, sustainability, and regulatory requirements.

***Atkinson Noland & Associates Engineering Internship* – 2025**

- Collaborated with structural engineers on historical preservation and building rehabilitation projects.
- Assisted with design modeling, engineering analyses, and construction document markups.
- Performed field investigations and material testing at active construction sites, historic buildings, and commercial structures.
